About us

GatiGo is a carpooling app that helps people share rides to make getting around cities easier, cheaper, and better for the environment. It connects drivers with empty seats to people who need a ride, aiming to reduce traffic, pollution, and build community. The app is designed to be easy to use and includes safety features like driver checks and real-time tracking.

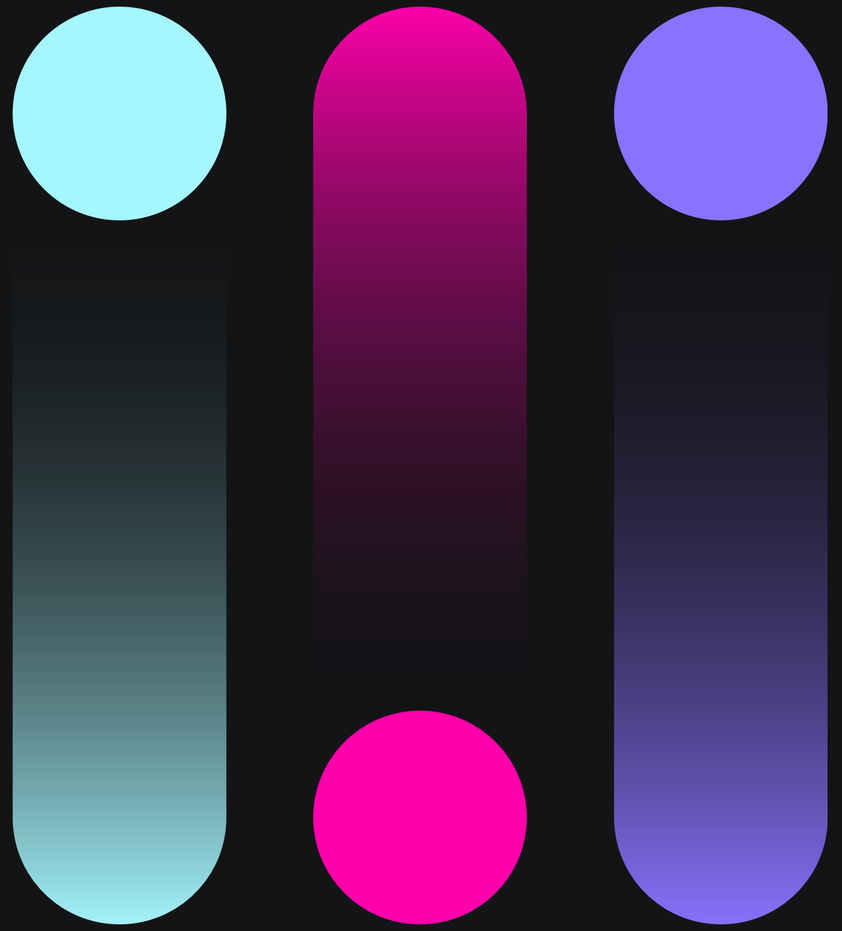

How GatiGo?

“After a long flight into Hyderabad airport, I felt tired and a bit worried about getting home without spending too much. I checked the prices of cabs in different ride hailing apps and the prices were very high. There were other people who were facing the same issue. Upon inquiring with then, I got to know that most of the people were living close to each other or on the way to other people’s location. That’s how I got the idea of a carpooling app so that people could travel together and save a lot of money.”

Business Model:

GatiGo is an app that connects people in Hyderabad who want to share rides. It helps drivers earn money and riders save money, while also reducing traffic and pollution. GatiGo uses technology to make carpooling easy for everyone, including companies, and builds a community of people who want to travel together and help the environment.

Our Business Model is **Platform-as-a-Service (PaaS)** which provides a digital platform that connects drivers and passengers, acting as a marketplace for shared rides.

Business Idea:

At **GatiGo**, our business idea was sparked by the need to address urban challenges like heavy traffic, rising vehicle costs, and environmental concerns. We noticed that millennials and Gen Z are increasingly favoring shared, on-demand mobility over car ownership.

By leveraging advances in mobile technology, digital payments, and real-time tracking, we saw an opportunity to create a seamless carpooling platform. This idea not only meets a clear market need but also supports a sustainable, eco-friendly future for urban commuting.

Value Proposition

At **GatiGo**, we deliver a smart and seamless carpooling experience that saves time, reduces travel costs, and lowers carbon emissions. By connecting drivers and riders in real time through our intuitive app, we offer a cost-effective and eco-friendly alternative to traditional commuting. Our robust safety protocols, secure digital payments, and advanced tracking ensure a reliable ride-sharing experience for every user.

Our Solution

At **GatiGo**, our solution is a tech-driven carpooling platform that connects drivers and riders in real time. Our mobile app features secure payments, live tracking, and strict safety protocols to reduce commuting costs, traffic congestion, and carbon emissions.

For corporate clients, we offer customized carpooling programs that streamline employee commutes and promote a greener, more efficient workplace.

01 Company Mission

GatiGo's mission is to revolutionize urban commutes through innovative, safe, and sustainable carpooling. Utilizing advanced technology, we aim to reduce traffic, lower carbon emissions, and foster community connections. We strive to make daily travel cost-effective and eco-friendly, paving the way for smarter, greener cities with each shared ride.

02 Company Vision

GatiGo envisions a future of seamless, sustainable urban mobility, fostering community through shared rides. By integrating technology and eco-friendly practices, we aim to reduce congestion and environmental impact, transforming commutes into opportunities for connection and responsible resource use, ultimately contributing to smarter, greener cities.

Objectives

Sustainability & Environmental Impact

We aim to reduce urban congestion and carbon emissions by promoting eco-friendly shared mobility solutions.

Safety & Convenience

Leveraging advanced technology, we are committed to providing a seamless, secure, and user-friendly ride-sharing experience.

Market Expansion

We focus on growing our user base and extending our services to diverse customer segments—including individual commuters and corporate partners—to make sustainable mobility accessible for all.

Community & Partnership Building

We strive to foster strategic partnerships and engage local communities, ensuring our services contribute to a connected, greener urban ecosystem.

Our Services

1. Smart Carpooling: Connect with verified drivers and fellow commuters heading the same way, reducing both travel costs and congestion.

2. Flexible Scheduling: Book rides on-demand or plan ahead for your daily journey. Our seamless app-based interface makes ride matching and scheduling effortless.

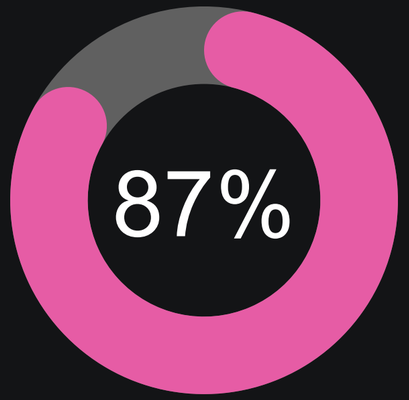

3. Real-Time Tracking & Safety: Enjoy peace of mind with live tracking, in-app SOS alerts, and stringent driver and vehicle verification protocols.

4. Intercity Carpooling: For those planning trips outside the city, our platform offers reliable long-distance ride-sharing options, ensuring comfort and savings on every journey.

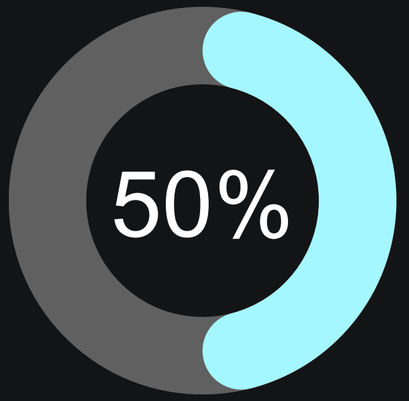

Market Size:

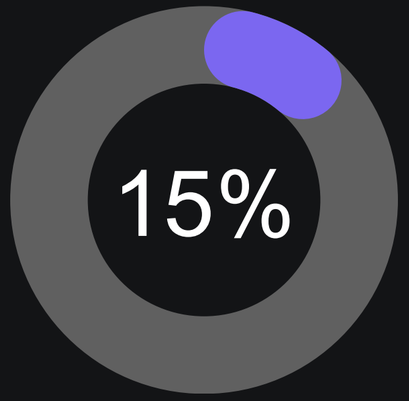

Total Addressable Market (TAM):

India's urban mobility market is projected to reach around $150 billion by 2030, with the ride-sharing segment estimated at approximately $20 billion annually.

Serviceable Available Market (SAM)

In key metropolitan areas like Hyderabad, Bengaluru, Mumbai, and Delhi, the share of the market for shared mobility is roughly $5 billion per year.

Serviceable Obtainable Market (SOM)

With a targeted market penetration of 5–10%, GatiGo can realistically capture an annual market opportunity of about $250–$500 million.

Competitor	Strengths	Weaknesses	Market Positioning	Differentiators
Quick Ride	Established local presence, cashless booking, strong user base in Hyderabad	UI/UX challenges; regulatory hurdles with white-plate usage	Focused on carpooling and bike pooling in specific regions	Tailored for regional needs, simple interface
UberPool / Ola Share	Extensive network, strong brand recognition, integrated ride-hailing service	Carpooling is secondary; inconsistent experience	Broad ride-sharing platforms offering multiple options	Leverage existing infrastructure and widespread reach
BlaBlaCar	Community-driven, popular for intercity travel, detailed driver profiles	Limited to long-distance rides; less suited for daily commutes	Focused on intercity, long-distance ride-sharing	Strong community reviews and focus on intercity routes
GatiGo	Tech-driven, eco-friendly, advanced safety & real-time tracking, tailored corporate solutions	New entrant with smaller initial market share	Dedicated to urban carpooling and corporate mobility	Emphasis on sustainability, innovative tech features

Problem

Traffic congestion, high commuting costs, and rising environmental concerns in rapidly growing urban areas.

Existing Alternatives

Currently, people use personal cars, public transit, and ride-hailing services like Uber and Ola. Some also try basic carpooling apps, but these options often fall short on safety, cost savings, or eco-friendliness.

Solution

A user-friendly app connecting drivers and riders for shared rides, featuring real-time tracking, secure digital payments, and strict safety protocols.

Key Metrics

Number of rides per day, user acquisition rate, retentionrate, average rating, corporate sign-ups.

Unique Value Proposition

Seamless, safe, and eco-friendly carpooling experience that reduces commuting costs and traffic congestion. Tailored solutions for both individual urban commuters and corporate employees.

High Level Concept

GatiGo is an eco-friendly carpooling platform that cuts traffic, saves costs, and reduces emissions.

Unfair Advantage

Dedicated focus on sustainability, strong corporate partnerships, and specialized safety measures (driver verification, in-app SOS) not always offered by general ride-hailing services.

Channels

Mobile app stores (iOS/Android), social media ads, corporate tie-ins, referral programs, community outreach.

Customer Segments

Urban commuters seeking affordable, eco-friendly transport; corporate employees needing streamlined commutes; environmentally conscious travelers.

Early Adopters

Millennials, Gen Z professionals, and green-minded users in tech-savvy cities (e.g., Hyderabad, Bengaluru).

Cost Structure

App development and maintenance, marketing and user acquisition, customer support, regulatory compliance, operational overhead.

Revenue Streams

Ride commissions, corporate partnership fees, premium subscription tiers, potential in-app advertising.

Our Finances

At GatiGo, our financial strategy is built for steady growth and sustainability. We are trying to secure early-stage funding from angel investors and venture capital partners, which will be crucial in developing our technology, expanding our services, and scaling our operations in key urban markets.

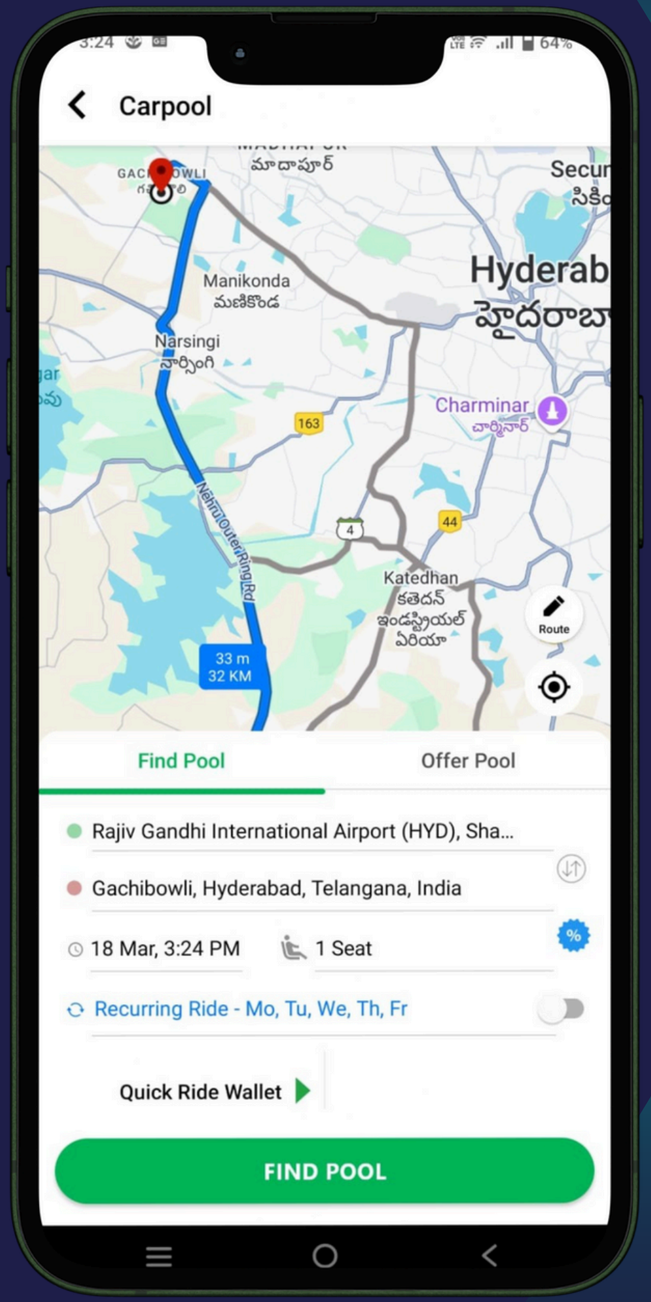

- **Revenue**

  Our revenue comes from ride commissions, corporate partnerships, and premium subscriptions. As more people use our service and new features launch, our revenue is set to grow steadily.

- **Expense**

  Our main expected expenses include technology development, marketing, customer support, and regulatory compliance. By keeping operations lean and reinvesting profits, we can control costs and drive growth. This balanced approach positions GatiGo for long-term success in urban mobility.

App Interface

SURVEY

Ahtesham: Too expensive to travel around city

Sai Charan: Opportunity to meet new people & make friends while traveling

Aprajit: Fewer cars on the road mean less pollution, making our world more eco-friendly.

Thank You

GatiGo transforms urban mobility with its eco-friendly, tech-driven carpooling solution that cuts costs and eases traffic. With robust revenue streams and lean operations, we are poised for sustainable, long-term success.
